## Iteration Plan - Week 1

By the following Friday, November 21, 2014, our goal is to address the majority of the main paths of Use Cases 1 and 2: Create Groups and Define Group Parameters, respectively.

Our framework will allow the professor to interact with a basic GUI prompt to enter his information, the class name/number, and how many students he wants in each group.  The framework will then pull the list of students in that class from a dummy list and sort them into groups of the size given by the professor or smaller, if the students cannot be evenly divided into groups of the given size (i.e. a class of 14 students - given a group size of 4 - will be divided into 3 groups of 4 and a group of 2).  The framework will then display all of the groups in the GUI for the professor.

Use Cases 1 and 2 will be submitted with our iteration next Friday.
